Technical Strategy & Architecture

Focus: Defining the "How" – The Platform Dilemma.

- 1. Architectural Approach:
 - Monolithic vs. Composable: Evaluating the trade-offs between a "Single Vendor Ecosystem" (e.g., all-in Autodesk/Bentley) vs. a "Microservices/Platform" approach (best-of-breed components on a unified Data Fabric).
- 2. The "Build vs. Buy" Balance:
 - Commercial Off-The-Shelf (COTS): Where do we use standard SaaS (Datum 360, ACC, AVEVA)?
 - Open-Source & In-House: Where do we leverage open standards (IFC, bSDD) and build our own connectors (RDF) to avoid vendor lock-in?
- 3. Integration Framework: Defining the backbone (APIM, Azure) that connects disparate tools into a *Unified* environment.
