

 Add cover

UPE Workstreams

I have added Governance and Platform and Tech Enablers to the original Pillars created by the team:

Initial suggestion is to complete the priority AS IS workstreams in the short term while we transition to more concrete TO BE outcome based workstreams, see below.

AS IS workstreams/Initiatives (priorities in bold - TBD)

Governance, Operating Model and Product Management - Initiatives - David

WS 0.1 Set up steer co and operating model

WS 0.2 Ownership map, who is responsible for what

WS 0.3 UPE single source of truth and comms

WS 0.4 Product Management

WS 0.5 Funding and resources

Connected Production Ecosystems - Initiatives -

Owned by: Poul, Michael and Tiia

Prioritized core tools - where is it going to be a pain to harmonize?

All connectivity between platforms and tools is mapped, file exchange tools and solutions mapped

Unify Platforms

Roll out Platforms across GBAs

Cloud to Cloud Connectivity

Integrated Realtime Collaboration

Accelerate AI enabled design ADSK

T4BOs

Production Engineering & Geospatial Data - Initiatives - Owned by: GBAs, Contributors, Tiia, Andrei, Olivier, Daniel..

Overview of data types - not sure of value of this all data should be harmonized and stored in a consistent way.

Unified Data foundation - *Move from files to information data backbone dev project?*

Data Harmonization

Enable Engineering Data for AI

Data Governance exploration

Data Handover templates

Standardization: for geospatial we need to make sure our metadata best practices are being used

Production Standards and Processes (Knowledge) - Initiatives - Owned by: GBAs

Standardized Production Processes

Agreed Rules and Procedures

Central best practices repository

Common Workflows

Ensure we are capturing the right thing

Reduce Friction to capture best practices/workflows

Combine process work with data model work .

Enforce best practice workflows via software tool

AI in DD&P Initiatives

Platform and Technology Enablement - Initiatives - Owned by:

WS 3.1 Unified Project Data Model - Project types, standards and rules,
project roles, processes, workflows

WS 3.2 AI accelerated Knowledge gathering - CAMINO Copilot --> Spy Bot?

WS 3.3 Unified Project Initialization and Provisioning

WS 3.4 Project data extraction - from files to consolidated structured data

WS 3.5 Open interoperability layer

Unified Collaboration

Unified

Enablement

TO BE

I think the following might be better more outcome-based work streams

Project Delivery Excellence

Standardize Project Delivery - Deliver our projects in a more efficient way, improving overall quality, enabling global work share, helping software harmonization, keeping Ramboll competitive in highly competitive sectors. By enforcing standard tool set use, standard processes, standard deliverables

Master Complex Project Delivery - Enabling seamless handover between disciplines, tools sets, and contractors, delivering more than just the basics, building Ramboll's reputation for digitally delivered mega projects.

WS 1.1 Identify the standard tool set to use for the project types we are to deliver (Done?)

WS 1.2 Identify the standards and rules applicable to project deliveries

WS 1.2 Identify the interoperability needed to enable the above best practice toolset to be used seamlessly

WS 1.3 Identify, document, govern best practice for Project Functions/roles, i.e. Project Manager, Bid Manager, Layout engineer, Architect, MEP engineer, etc etc.

WS 1.4 Develop repeatable templates, processes, workflows and best-practice guidance for projects that combine the above inputs, and the governance associated with that. (Camino - what's missing? are we operating at the right level)

WS 1.5 Develop the toolset to enforce the above

Enable Data Centric Projects (WIP)

Business Decision Support (WIP)

AI in DD&P (WIP)

AI driven Automation

AI delivered knowledge

Centralize Collaboration (WIP)

Platform and Technology Enablement (WIP)

WS 3.1 Ramboll UPE Data Model Project types, standards and rules, project roles, processes, workflows

WS 3.2 AI accelerated Knowledge gathering

WS 3.3 Project data extraction - from files to consolidated structured data

Business Enablement (WIP)
